## List of Contents

### Introduction

1.	Aims and contents of the individual experiments . . . . .	1
2.	Some important terms and symbols . . . . .	4
3.	Notes on measurement techniques . . . . .	7
4.	Assessment of control systems . . . . .	8
5.	Assessment of controllers . . . . .	7
6.	Assessment of control circuits . . . . .	8

### Experiments section

#### Control systems

1.	Control systems with P Behaviour and 1st order delay . . . . .	11
1.1	Introduction . . . . .	11
1.2	Proportional action factor and time constant of a control system with P-behaviour and 1st order delay . . . . .	13
2.	Control systems with P Behaviour and 3rd order delay . . . . .	17
2.1	Introduction . . . . .	17
2.2	Proportional action factor, delay time and compensation time of a control system with P Behaviour and 3rd order delay . . . . .	19
3.	Control systems with I Behaviour . . . . .	23
3.1	Introduction . . . . .	23
3.2	Rise speed and integral action factor of a control system with I Behaviour . . . . .	25

---

## Controllers

4.	P controller . . . . .	29
4.1	Introduction . . . . .	29
4.2	Proportional action factor of the P controller . . . . .	30
5.	PI controller . . . . .	33
5.1	Introduction . . . . .	33
5.2	Integral action time, integral action factor and proportional action factor of the PI controller . . .	35
6.	PD controller . . . . .	39
6.1	Introduction . . . . .	39
6.2	Jump reply and rise reply of the PD controller . . . . .	41
7.	PID controller . . . . .	45
7.1	Introduction . . . . .	45
7.2	Jump reply and rise reply of the PID controller . . . . .	46
8.	Two-step controller . . . . .	49
8.1	Introduction . . . . .	49
8.2	Switching behaviour of the two-step controller . . . . .	50

## Control circuits

9.	P-T <sub>1</sub> system, controlled by a P and a PI controller . . . . .	53
9.1	Introduction . . . . .	53
9.2	Static behaviour of a P-T <sub>1</sub> system, controlled by a P and a PI controller . . . . .	53
9.3	Dynamic behaviour of a P-T <sub>1</sub> system, controlled by a P and a PI controller . . . . .	55

10.	P-T <sub>1</sub> system, controlled by a two-step controller . . . . .	59
10.1	Introduction . . . . .	59
10.2	Influence of the setpoint on the control performance in a P-T <sub>1</sub> system, controlled by a two-step controller . . . . .	59
10.3	Influence of the switching difference on the control performance in a P-T <sub>1</sub> control system, controlled by a two-step controller . . . . .	61
11.	P-T <sub>3</sub> control system, controlled by a P and a PD controller . . . . .	63
11.1	Introduction . . . . .	63
11.2	Overview of the individual variables when using a P controller in a P-T <sub>3</sub> control system . . . . .	63
11.3	Control performance at different proportional action factors and integral action times when using P and PD controllers in a P-T <sub>3</sub> control system . . . . .	65
12.	P-T <sub>3</sub> system, controlled by a PID controller . . . . .	69
12.1	Introduction . . . . .	69
12.2	Influence of the parameters of the PID controller on the control performance in a P-T <sub>3</sub> control system . . . . .	69
13.	P-T <sub>3</sub> control system, controlled by a two-step controller . . . . .	73
13.1	Introduction . . . . .	73
13.2	Influence of the command variable and the switching difference of the two-step controller on the control performance in a P-T <sub>3</sub> control system . . . . .	73
14.	P-T <sub>3</sub> control system, controlled by a two-step controller with feedback . . . . .	77
14.1	Introduction . . . . .	77
14.2	Two-step controller with feedback as an oscillator . . . . .	77
14.3	Comparison of the control performance in a P-T <sub>3</sub> system, controlled by a two-step controller with and without feedback . . . . .	80

---

15.	I control system with and without additional delay, controlled by a P controller . . . . .	83
15.1	Introduction . . . . .	83
15.2	Overview of the relationships in the control circuit with an I system without delay, controlled by a P controller . . . . .	83
15.3	Control behaviour of the I system with and without delay at different proportional action factors of the P controller . . . . .	85
16.	Simulation of a position control circuit in a machine tool . . . . .	89
16.1	Introduction . . . . .	89
16.2	Sequential behaviour of the I control system with delay controlled by a P controller . . . . .	91
17.	Controller optimization on the basis of the jump reply according to Chien, Hrones and Reswick . . . . .	95
17.1	Introduction . . . . .	95
17.2	Optimization measurements . . . . .	96
18.	Controller optimization on the basis of the critical controller setting according to Ziegler and Nichols . . . . .	101
18.1	Introduction . . . . .	101
18.2	Optimization measurements . . . . .	103
<b>Solutions</b>		L 1... L 48
<b>Appendix</b>		A 1... A 2
