List of Contents

Introduction	1
1. Fundamental theory of modulation technology	3
2. Addition and multiplication	9
2.1 The adder	9
2.2 The multiplier	25
3. Amplitude Modulation (AM)	
3.1 Theoretical introduction	33
3.2 Modulation on a non-linear characteristic	35
3.3 Amplitude modulation with a multiplier	45
3.4 Spectrum and bandwidth of the AM	51
3.5 AM-DSB with suppressed carrier	55
3.6 The multiplier in balanced modulator mode	57
3.7 The multiplier in ring modulator mode	61
3.8 Single sideband modulation (SSB)	65
4. Angle modulation techniques	
4.1 Theoretical introduction	73
4.2 Generation of frequency modulated signals (FM)	75
4.3 Measuring the frequency deviation	79
4.4 Determining the modulation index	81
4.5 Frequency spectrum of an FM oscillation	85
4.6 Generation of phase modulated signals (PM)	91
4.7 Generation of pulse frequency modulated signals (PFM)	101
4.8 Generation of pulse phase modulated signals (PPM)	105

5. Digital modulation techniques

5.1 Theoretical introduction	107
5.2 Generation of amplitude shift keying signals (ASK)	115
5.3 Spectrum of amplitude shift keying signals	119
5.4 Generation of frequency shift keying signals (FSK)	129
5.5 Spectrum of frequency shift keying signals	131
5.6 Generation of phase shift keying signals (PSK)	133
5.7 Spectrum of phase shift keying signals	137

6. Pulse modulation techniques

6.1 Theoretical introduction	143
6.2 Generation of a pulse amplitude modulated signal	145
6.3 Frequency spectrum of the pulse amplitude modulated signal	151
6.4 Explanation of the sampling theorem	155
6.5 Time-division multiplexing	159

7. Pulse code modulation

7.1 Theoretical introduction	165
7.2 Experiments with pulse code modulator	169
7.3 PCM multiplex generation	173

8. Delta modulation

8.1 Theoretical introduction	177
8.2 Generation of delta modulated signals (DM)	179

Solutions	L 1 ... L 80
----------------------------	--------------

Appendix	A 1 ... A 3
---------------------------	-------------
